Product datasheet for RC221007L2

TWEAK (TNFSF12) (NM_003809) Human Tagged Lenti ORF Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	TWEAK (TNFSF12) (NM_003809) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	TWEAK
Synonyms:	APO3L; DR3LG; TNLG4A; TWEAK
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC221007).
Restriction Sites:	Ascl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	<i>Asc I</i> ORF <i>Mlu I</i> GGC GCG CC C ATG// NNŇ ACG CGT

ACCN: ORF Size: NM_003809 747 bp

	AK (TNFSF12) (NM_003809) Human Tagged Lenti ORF Clone – RC221007L2
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metho	 d: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 003809.2</u>
RefSeq Size:	1407 bp
RefSeq ORF:	750 bp
Locus ID:	8742
UniProt ID:	<u>O43508</u>
Cytogenetics:	17p13.1
Protein Families:	Druggable Genome, Secreted Protein, Transmembrane
Protein Pathways:	Cytokine-cytokine receptor interaction
MW:	27.22 kDa

GRIGENE TWEAK (TNFSF12) (NM_003809) Human Tagged Lenti ORF Clone – RC221007L2

Gene Summary:The protein encoded by this gene is a cytokine that belongs to the tumor necrosis factor (TNF)
ligand family. This protein is a ligand for the FN14/TWEAKR receptor. This cytokine has
overlapping signaling functions with TNF, but displays a much wider tissue distribution. This
cytokine, which exists in both membrane-bound and secreted forms, can induce apoptosis
via multiple pathways of cell death in a cell type-specific manner. This cytokine is also found
to promote proliferation and migration of endothelial cells, and thus acts as a regulator of
angiogenesis. Alternative splicing results in multiple transcript variants. Some transcripts skip
the last exon of this gene and continue into the second exon of the neighboring TNFSF13
gene; such read-through transcripts are contained in GeneID 407977, TNFSF12-TNFSF13.
