Cytochrome P450 26B (CYP26B1) (NM_019885) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cytochrome P450 26B (CYP26B1) (NM 019885) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Cytochrome P450 26B

Synonyms: CYP26A2; P450RAI-2; P450RAI2; RHFCA

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

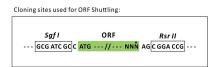

ORF Nucleotide

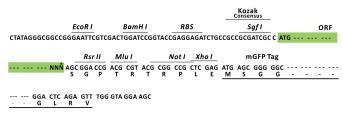

The ORF insert of this clone is exactly the same as(RC221075).

Sequence:

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

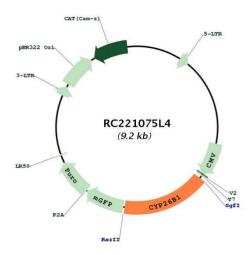

^{*} The last codon before the Stop codon of the ORF

Plasmid Map:

ACCN: NM_019885

ORF Size: 1536 bp

OTI Disclaimer:

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at customport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: <u>NM 019885.3</u>, <u>NP 063938.1</u>

 RefSeq Size:
 4567 bp

 RefSeq ORF:
 1539 bp

 Locus ID:
 56603

 UniProt ID:
 Q9NR63

Cytogenetics: 2p13.2

Protein Families: Druggable Genome, P450

Protein Pathways: Retinol metabolism

MW: 58 kDa

Gene Summary: This gene encodes a member of the cytochrome P450 superfamily. The cytochrome P450

proteins are monooxygenases which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. The encoded protein is localized to the endoplasmic reticulum, and functions as a critical regulator of all-trans retinoic acid levels by the specific inactivation of all-trans retinoic acid to hydroxylated forms. Mutations in this gene are associated with radiohumeral fusions and other skeletal and craniofacial anomalies, and

increased levels of the encoded protein are associated with atherosclerotic lesions.

Alternative splicing results in multiple transcript variants. [provided by RefSeq, Apr 2013]
