## CDC14B (NM\_001077181) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** CDC14B (NM\_001077181) Human Tagged ORF Clone Lentiviral Particle

Symbol: CDC14B

Synonyms: Cdc14B1; Cdc14B2; CDC14B3; hCDC14B

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

**ACCN:** NM\_001077181

ORF Size: 1383 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC221171).

Sequence:

**UniProt ID:** 

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001077181.1</u>

RefSeq Size:5131 bpRefSeq ORF:1386 bpLocus ID:8555

**Cytogenetics:** 9q22.32-q22.33

**Protein Families:** Druggable Genome, Phosphatase

O60729

**Protein Pathways:** Cell cycle

ORIGENE

**MW:** 52.1 kDa

**Gene Summary:** 

The protein encoded by this gene is a member of the dual specificity protein tyrosine phosphatase family. This protein is highly similar to Saccharomyces cerevisiae Cdc14, a protein tyrosine phosphatase involved in the exit of cell mitosis and initiation of DNA replication, which suggests the role in cell cycle control. This protein has been shown to interact with and dephosphorylates tumor suppressor protein p53, and is thought to regulate the function of p53. Alternative splice of this gene results in 3 transcript variants encoding distinct isoforms. [provided by RefSeq, Jul 2008]
