OriGene Technologies, Inc.

GNAT1 (NM_144499) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: GNAT1 (NM_144499) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: GNAT1

Synonyms: CSNB1G; CSNBAD3; GBT1; GNATR

Mammalian Cell None

Selection:

Vector: pLenti-C-mGFP (PS100071)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC221246).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_144499

ORF Size: 1050 bp

GNAT1 (NM_144499) Human Tagged Lenti ORF Clone - RC221246L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 144499.1</u>

 RefSeq Size:
 2419 bp

 RefSeq ORF:
 1053 bp

 Locus ID:
 2779

UniProt ID: P11488
Cytogenetics: 3p21.31

Protein Families: Druggable Genome

MW: 39.9 kDa

Gene Summary: Transducin is a 3-subunit guanine nucleotide-binding protein (G protein) which stimulates the

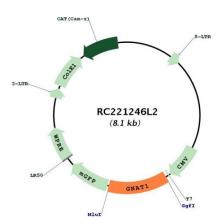

coupling of rhodopsin and cGMP-phoshodiesterase during visual impulses. The transducin alpha subunits in rods and cones are encoded by separate genes. This gene encodes the alpha subunit in rods. This gene is also expressed in other cells, and has been implicated in bitter taste transduction in rat taste cells. Mutations in this gene result in autosomal

encoding the same protein, have been identified. [provided by RefSeq, Feb 2009]

dominant congenital stationary night blindness. Multiple alternatively spliced variants,
