## Product datasheet for RC221360L2V

## MRC2 (NM\_006039) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

| Product Type:                | Lentiviral Particles   |
|------------------------------|--|
| Product Name:                | MRC2 (NM_006039) Human Tagged ORF Clone Lentiviral Particle  |
| Symbol:                      | MRC2   |
| Synonyms:                    | CD280; CLEC13E; ENDO180; UPARAP  |
| Mammalian Cell<br>Selection: | None   |
| Vector:                      | pLenti-C-mGFP (PS100071)   |
| Tag:                         | mGFP   |
| ACCN:                        | NM_006039  |
| ORF Size:                    | 4437 bp  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC221360).   |
| OTI Disclaimer:              | Due to the inherent nature of this plasmid, standard methods to replicate additional<br>amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements.<br>Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.<br>Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence<br>verification at a reduced cost. Please contact our customer care team at<br><u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.<br>The molecular sequence of this clone aligns with the gene accession number as a point of<br>reference only. However, individual transcript sequences of the same gene can differ through<br>naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This |
|                              | clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| RefSeq:                      | <u>NM 006039.2, NP 006030.1</u>  |
| RefSeq Size:                 | 4700 bp  |
| RefSeq ORF:                  | 4440 bp  |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

|                  | MRC2 (NM_006039) Human Tagged ORF Clone Lentiviral Particle – RC221360L2V  |
|------------------|--|
| Locus ID:        | 9902   |
| UniProt ID:      | <u>Q9UBG0</u>  |
| Cytogenetics:    | 17q23.2  |
| Protein Families | Druggable Genome, Transmembrane  |
| MW:              | 166.5 kDa  |
| Gene Summary:    | This gene encodes a member of the mannose receptor family of proteins that contain a<br>fibronectin type II domain and multiple C-type lectin-like domains. The encoded protein plays<br>a role in extracellular matrix remodeling by mediating the internalization and lysosomal<br>degradation of collagen ligands. Expression of this gene may play a role in the tumorigenesis<br>and metastasis of several malignancies including breast cancer, gliomas and metastatic bone<br>disease. [provided by RefSeq, Feb 2012] |
