FACL4 (ACSL4) (NM_022977) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: FACL4 (ACSL4) (NM_022977) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: FACL4

Synonyms: ACS4; FACL4; LACS4; MRX63; MRX68

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC221413).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_022977

ORF Size: 2133 bp

FACL4 (ACSL4) (NM_022977) Human Tagged Lenti ORF Clone - RC221413L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 022977.1

 RefSeq Size:
 5356 bp

 RefSeq ORF:
 2136 bp

 Locus ID:
 2182

 UniProt ID:
 060488

Cytogenetics: Xq23

Protein Families:

Domains: AMP-binding

90

Druggable Genome, Transmembrane

Protein Pathways: Adipocytokine signaling pathway, Fatty acid metabolism, Metabolic pathways, PPAR signaling

pathway

MW: 79 kDa

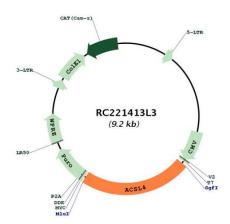

Gene Summary: The protein encoded by this gene is an isozyme of the long-chain fatty-acid-coenzyme A

ligase family. Although differing in substrate specificity, subcellular localization, and tissue distribution, all isozymes of this family convert free long-chain fatty acids into fatty acyl-CoA esters, and thereby play a key role in lipid biosynthesis and fatty acid degradation. This isozyme preferentially utilizes arachidonate as substrate. The absence of this enzyme may contribute to the cognitive disability or Alport syndrome. Alternative splicing of this gene

generates multiple transcript variants. [provided by RefSeq, Jan 2016]
