ARMCX3 (NM_016607) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: ARMCX3 (NM_016607) Human Tagged ORF Clone Lentiviral Particle

Symbol: ARMCX3

Synonyms: ALEX3; dJ545K15.2; GASP6

Mammalian Cell

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_016607 **ORF Size:** 1137 bp

ORF Nucleotide

1137 bp

Sequence:
OTI Disclaimer:

The ORF insert of this clone is exactly the same as(RC221471).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 016607.3, NP 057691.1

RefSeq Size: 3395 bp
RefSeq ORF: 1140 bp
Locus ID: 51566
UniProt ID: Q9UH62
Cytogenetics: Xq22.1
Domains: DUF634

Protein Families: Transmembrane

ARMCX3 (NM_016607) Human Tagged ORF Clone Lentiviral Particle - RC221471L2V

MW: 42.3 kDa

Gene Summary:

This gene encodes a member of the ALEX family of proteins which may play a role in tumor suppression. The encoded protein contains a potential N-terminal transmembrane domain and a single Armadillo (arm) repeat. Other proteins containing the arm repeat are involved in development, maintenance of tissue integrity, and tumorigenesis. This gene is closely localized with other family members on the X chromosome. Three transcript variants encoding the same protein have been identified for this gene. [provided by RefSeq, Jul 2008]
