GRF2 (RAPGEF1) (NM_005312) Human Tagged ORF Clone Lentiviral Particle – RC221671L3V	
Protein Pathways:	Focal adhesion, Insulin signaling pathway, Neurotrophin signaling pathway, Renal cell carcinoma
MW:	120.4 kDa
Gene Summary:	This gene encodes a human guanine nucleotide exchange factor. It transduces signals from CRK by binding the SH3 domain of CRK, and activating several members of the Ras family of GTPases. This signaling cascade that may be involved in apoptosis, integrin-mediated signal transduction, and cell transformation. Several alternatively spliced transcript variants of this gene have been described, but the full-length nature of some variants has not been determined. [provided by RefSeq, Jul 2008]
