CD105 (ENG) (NM_000118) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CD105 (ENG) (NM_000118) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: CD105

Synonyms: END; HHT1; ORW1

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

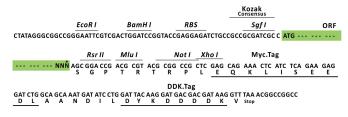

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC221699).

Sequence:

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_000118

ORF Size: 1884 bp

CD105 (ENG) (NM_000118) Human Tagged Lenti ORF Clone - RC221699L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000118.1</u>

 RefSeq Size:
 3142 bp

 RefSeq ORF:
 1878 bp

 Locus ID:
 2022

 UniProt ID:
 P17813

Cytogenetics: 9q34.11

Domains: zona pellucida

Protein Families: Druggable Genome, ES Cell Differentiation/IPS, Transmembrane

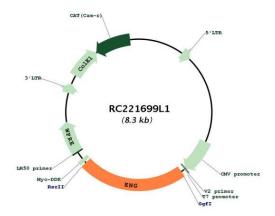

MW: 67.78 kDa

Gene Summary: This gene encodes a homodimeric transmembrane protein which is a major glycoprotein of

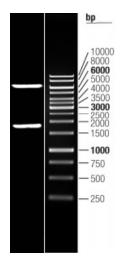

the vascular endothelium. This protein is a component of the transforming growth factor beta receptor complex and it binds to the beta1 and beta3 peptides with high affinity. Mutations in this gene cause hereditary hemorrhagic telangiectasia, also known as Osler-Rendu-Weber syndrome 1, an autosomal dominant multisystemic vascular dysplasia. This gene may also be involved in preeclampsia and several types of cancer. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, May 2013]
