RHBDL1 (NM_003961) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: RHBDL1 (NM_003961) Human Tagged Lenti ORF Clone

Tag: Myc-DDK Symbol: RHBDL1

Synonyms: RHBDL; RRP

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC221768).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_003961

ORF Size: 1314 bp

RHBDL1 (NM_003961) Human Tagged Lenti ORF Clone - RC221768L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 003961.1</u>, <u>NP 003952.1</u>

RefSeq Size:1559 bpRefSeq ORF:1316 bpLocus ID:9028

Cytogenetics:

Protein Families: Protease, Transmembrane

16p13.3

MW: 48.3 kDa

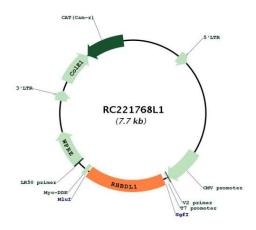

Gene Summary: This gene encodes a protein similar to Rhomboid in Drosophila which is involved in signalling

in the Spitz/epidermal growth factor receptor/mitogen-activated protein kinase pathway. The Rhomboid family of proteins consists of intramembrane serine proteases containing several transmembrane domains. Alternative splicing results in multiple transcript variants encoding

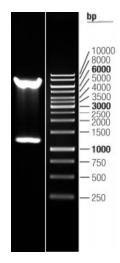

different isoforms. [provided by RefSeq, Jul 2013]
