<b>ORIGENE</b> TrkB (NTRK2) (NM_006180) Human Tagged ORF Clone Lentiviral Particle – RC221794L3V	
Protein Pathways:	MAPK signaling pathway, Neurotrophin signaling pathway
MW:	93.83 kDa
Gene Summary:	This gene encodes a member of the neurotrophic tyrosine receptor kinase (NTRK) family. This kinase is a membrane-bound receptor that, upon neurotrophin binding, phosphorylates itself and members of the MAPK pathway. Signalling through this kinase leads to cell differentiation. Mutations in this gene have been associated with obesity and mood disorders. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2014]
