## ANKHD1 (NM\_017978) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** ANKHD1 (NM\_017978) Human Tagged ORF Clone Lentiviral Particle

Symbol: ANKHD1

Synonyms: MASK; MASK1; PP2500; VBARP

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_017978 **ORF Size:** 1848 bp

**ORF Nucleotide** 

Sequence:

The ORF insert of this clone is exactly the same as(RC221886).

OTI Disclaimer: Due to the inherent nature of this plasmid, standard methods to replicate additional

amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

verification at a reduced cost. Please contact our customer care team at

<u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 017978.1</u>

RefSeq Size: 2149 bp RefSeq ORF: 1851 bp

## ANKHD1 (NM\_017978) Human Tagged ORF Clone Lentiviral Particle - RC221886L4V

**Locus ID:** 54882

 UniProt ID:
 Q8IWZ3

 Cytogenetics:
 5q31.3

 MW:
 63.7 kDa

**Gene Summary:** This gene encodes a protein with multiple ankyrin repeat domains and a single KH-domain.

The protein is thought to function as a scaffolding protein, and it may be involved in the regulation of caspases and thereby play an antiapoptotic role in cell survival. Alternative splicing results in multiple transcript variants, one of which generates a fusion transcript (MASK-BP3) with the downstream eIF4E-binding protein 3 (EIF4EBP3) gene, resulting in a protein comprised of the ANKHD1 sequence for the majority of the protein and a different C-terminus due to an alternate reading frame for the EIF4EBP3 segments.
