Gene Summary:This gene encodes a member of the ADP-ribosylation factor-like family. The encoded protein
is a small GTPase that contains both N-terminal and C-terminal guanine nucleotide-binding
motifs. This protein is localized in the cilia and plays a role in cilia formation and in
maintenance of cilia. Mutations in this gene are the cause of Joubert syndrome 8. Alternate
splicing results in multiple transcript variants. [provided by RefSeq, Mar 2010]
