

Product datasheet for RC221961L4

LBP (NM_004139) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: LBP (NM_004139) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: LBP

Synonyms: BPIFD2

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC221961).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_004139

ORF Size: 1443 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

LBP (NM_004139) Human Tagged Lenti ORF Clone - RC221961L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 004139.2</u>

 RefSeq Size:
 1823 bp

 RefSeq ORF:
 1446 bp

 Locus ID:
 3929

 UniProt ID:
 P18428

Cytogenetics: 20q11.23

Domains: BPI1

Protein Families: Druggable Genome, Secreted Protein
Protein Pathways: Toll-like receptor signaling pathway

MW: 53.38 kDa

Gene Summary: The protein encoded by this gene is involved in the acute-phase immunologic response to

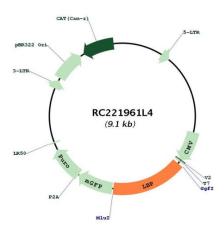

gram-negative bacterial infections. Gram-negative bacteria contain a glycolipid,

lipopolysaccharide (LPS), on their outer cell wall. Together with bactericidal permeability-increasing protein (BPI), the encoded protein binds LPS and interacts with the CD14 receptor, probably playing a role in regulating LPS-dependent monocyte responses. Studies in mice suggest that the encoded protein is necessary for the rapid acute-phase response to LPS but not for the clearance of LPS from circulation. This protein is part of a family of structurally and functionally related proteins, including BPI, plasma cholesteryl ester transfer protein

(CETP), and phospholipid transfer protein (PLTP). [provided by RefSeq, Apr 2012]
