LHCGR (NM_000233) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: LHCGR (NM 000233) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: LHCGR

Synonyms: HHG; LCGR; LGR2; LH/CG-R; LH/CGR; LHR; LHRHR; LSH-R; ULG5

Mammalian Cell None

Selection:

Vector:pLenti-C-mGFP (PS100071)E. coli Selection:Chloramphenicol (34 ug/mL)

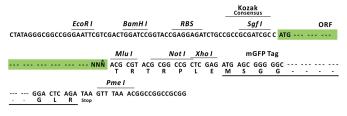

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC222051).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_000233

ORF Size: 2097 bp

LHCGR (NM_000233) Human Tagged Lenti ORF Clone - RC222051L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000233.1</u>, <u>NP 000224.1</u>

 RefSeq Size:
 2995 bp

 RefSeq ORF:
 2100 bp

 Locus ID:
 3973

 UniProt ID:
 P22888

Cytogenetics:

Protein Families: Druggable Genome, Transmembrane

2p16.3

Protein Pathways: Calcium signaling pathway, Neuroactive ligand-receptor interaction

MW: 78.5 kDa

Gene Summary: This gene encodes the receptor for both luteinizing hormone and choriogonadotropin. This

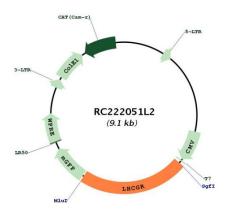

receptor belongs to the G-protein coupled receptor 1 family, and its activity is mediated by G proteins which activate adenylate cyclase. Mutations in this gene result in disorders of male secondary sexual character development, including familial male precocious puberty, also known as testotoxicosis, hypogonadotropic hypogonadism, Leydig cell adenoma with

precocious puberty, and male pseudohermaphtoditism with Leydig cell hypoplasia. [provided

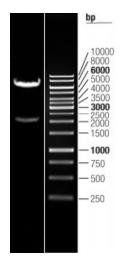

by RefSeq, Jul 2008]
