## S100 Calcium Binding Protein A13 (S100A13) (NM\_005979) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: S100 Calcium Binding Protein A13 (S100A13) (NM\_005979) Human Tagged ORF Clone

Lentiviral Particle

Symbol: S100 Calcium Binding Protein A13

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_005979

ORF Size: 294 bp

**ORF Nucleotide** 

\_. \_\_\_

Sequence:

The ORF insert of this clone is exactly the same as(RC222165).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 005979.2</u>, <u>NP 005970.1</u>

 RefSeq Size:
 743 bp

 RefSeq ORF:
 297 bp

 Locus ID:
 6284

 UniProt ID:
 099584

Cytogenetics: 1q21.3

Domains: S 100

**Protein Families:** Druggable Genome

**MW:** 11.5 kDa

**Gene Summary:** 

The protein encoded by this gene is a member of the S100 family of proteins containing 2 EF-hand calcium-binding motifs. S100 proteins are localized in the cytoplasm and/or nucleus of a wide range of cells, and involved in the regulation of a number of cellular processes such as cell cycle progression and differentiation. S100 genes include at least 13 members which are located as a cluster on chromosome 1q21. This protein is widely expressed in various types of tissues with a high expression level in thyroid gland. In smooth muscle cells, this protein co-expresses with other family members in the nucleus and in stress fibers, suggesting diverse functions in signal transduction. Multiple alternatively spliced transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Jul 2008]
