ASIC3 (NM_020321) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ASIC3 (NM_020321) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: ASIC3

Synonyms: ACCN3; DRASIC; SLNAC1; TNaC1

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC222273).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_020321

ORF Size: 1647 bp

ASIC3 (NM_020321) Human Tagged Lenti ORF Clone - RC222273L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 020321.3</u>, <u>NP 064717.1</u>

RefSeq Size: 2314 bp
RefSeq ORF: 1650 bp
Locus ID: 9311

UniProt ID: Q9UHC3

Cytogenetics: 7q36.1

Domains: ASC

Protein Families: Druggable Genome, Ion Channels: Other

MW: 60.5 kDa

Gene Summary: This gene encodes a member of the degenerin/epithelial sodium channel (DEG/ENaC)

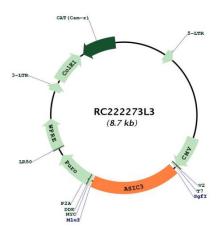

superfamily. The members of this family are amiloride-sensitive sodium channels that contain

intracellular N and C termini, two hydrophobic transmembrane regions, and a large extracellular loop, which has many cysteine residues with conserved spacing. The member encoded by this gene is an acid sensor and may play an important role in the detection of lasting pH changes. In addition, a heteromeric association between this member and acid-sensing (proton-gated) ion channel 2 has been observed as proton-gated channels sensitive to gadolinium. Alternatively spliced transcript variants have been described. [provided by

RefSeq, Feb 2012]
