## Cathepsin B (CTSB) (NM 001908) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Cathepsin B (CTSB) (NM\_001908) Human Tagged ORF Clone Lentiviral Particle

Symbol: Cathepsin B

**Synonyms:** APPS; CPSB; RECEUP

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_001908 **ORF Size:** 1017 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC222289).

Sequence:

**Domains:** 

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 001908.3

 RefSeq Size:
 3783 bp

 RefSeq ORF:
 1020 bp

 Locus ID:
 1508

 UniProt ID:
 P07858

 Cytogenetics:
 8p23.1

**Protein Families:** Druggable Genome, Protease

Pept\_C1

**Protein Pathways:** Antigen processing and presentation, Lysosome

MW: 37.8 kDa

**Gene Summary:** This gene encodes a member of the C1 family of peptidases. Alternative splicing of this gene

results in multiple transcript variants. At least one of these variants encodes a preproprotein that is proteolytically processed to generate multiple protein products. These products include the cathepsin B light and heavy chains, which can dimerize to form the double chain form of the enzyme. This enzyme is a lysosomal cysteine protease with both endopeptidase and exopeptidase activity that may play a role in protein turnover. It is also known as amyloid precursor protein secretase and is involved in the proteolytic processing of amyloid precursor protein (APP). Incomplete proteolytic processing of APP has been suggested to be a causative factor in Alzheimer's disease, the most common cause of dementia. Overexpression of the encoded protein has been associated with esophageal adenocarcinoma and other tumors. Both Cathepsin B and Cathepsin L are involved in the cleavage of the spike protein from the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) upon its entry to the human host cell. Multiple pseudogenes of this gene have been identified. [provided by

RefSeq, Sep 2020]
