

Product datasheet for RC222474L3V

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

FBXO4 (NM_033484) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: FBXO4 (NM_033484) Human Tagged ORF Clone Lentiviral Particle

Symbol: FBXO4
Synonyms: FBX4

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag:Myc-DDKACCN:NM_033484

ORF Size: 921 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC222474).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 033484.1, NP 277019.1

RefSeq Size: 1746 bp
RefSeq ORF: 924 bp
Locus ID: 26272
UniProt ID: Q9UKT5
Cytogenetics: 5p13.1
Domains: F-box

Protein Families: Druggable Genome

FBXO4 (NM_033484) Human Tagged ORF Clone Lentiviral Particle - RC222474L3V

Protein Pathways: Ubiquitin mediated proteolysis

MW: 34.8 kDa

Gene Summary: This gene encodes a member of the F-box protein family which is characterized by an

approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four subunits of the ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein encoded by this gene belongs to the Fbxs class. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul

2014]
