

Product datasheet for RC222476

ATP5MC2 (NM_001002031) Human Tagged ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	ATP5MC2 (NM_001002031) Human Tagged ORF Clone
Tag:	Myc-DDK
Symbol:	ATP5MC2
Synonyms:	ATP5A; ATP5G2
Mammalian Cell Selection:	Neomycin
Vector:	pCMV6-Entry (PS100001)
E. coli Selection:	Kanamycin (25 ug/mL)
ORF Nucleotide Sequence:	<pre>>RC222476 representing NM_001002031 Red=Cloning site Blue=ORF Green=Tags(s)</pre>

GRIGENE ATP5MC2 (NM_001002031) Human Tagged ORF Clone – RC222476

 naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water). Reconstitution Method: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 	Restriction Sites:	Sgfl-Mlul
ACCN: NM_001002031 OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variants is recommended prior to use. More info OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. OTI Annotation: The Cher Construction of the same gene contained prior to use. More info OTI Annotation: This clone was engineered to express the complete of the solution of the gene. Components: The Cher Construction of the gene. Construction Method: 1. Centrifuge at 5,000xg for 5min. 2. Close the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and then do a quick spin (less than 5000xg) to concentrate the liquic at the bottom. 3. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C. RefSeq Size: 1094 bp RefSeq ORF: 474 bp	Cloning Scheme:	Cloning sites used for ORF Shuttling:

UniProt ID:	<u>Q06055</u>	
Cytogenetics:	12q13.13	
Protein Families:	Transmembrane	
Protein Pathways:	Alzheimer's disease, Huntington's disease, Metabolic pathways, Oxidative phosphorylation, Parkinson's disease	
MW:	16.33 kDa	
Gene Summary:	This gene encodes a subunit of mitochondrial ATP synthase. Mitochondrial ATP synthase catalyzes ATP synthesis, utilizing an electrochemical gradient of protons across the inner membrane during oxidative phosphorylation. ATP synthase is composed of two linked multi-subunit complexes: the soluble catalytic core, F1, and the membrane-spanning component, Fo, comprising the proton channel. The catalytic portion of mitochondrial ATP synthase consists of 5 different subunits (alpha, beta, gamma, delta, and epsilon) assembled with a stoichiometry of 3 alpha, 3 beta, and single representatives of the gamma, delta, and epsilon subunits. The proton channel likely has nine subunits (a, b, c, d, e, f, g, F6 and 8). There are three separate genes which encode subunit c of the proton channel and they specify precursors with different import sequences but identical mature proteins. The protein encoded by this gene is one of three precursors of subunit c. This gene has multiple pseudogenes. [provided by RefSeq, Jan 2018]
