OTI Disclaimer:

Sequence:

The ORF insert of this clone is exactly the same as(RC222532).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## SLC26A4 (NM\_000441) Human Tagged ORF Clone Lentiviral Particle - RC222532L3V

**MW:** 85.5 kDa

**Gene Summary:** Mutations in this gene are associated with Pendred syndrome, the most common form of

syndromic deafness, an autosomal-recessive disease. It is highly homologous to the SLC26A3 gene; they have similar genomic structures and this gene is located 3' of the SLC26A3 gene. The encoded protein has homology to sulfate transporters. [provided by RefSeq, Jul 2008]
