## CLACP (COL25A1) (NM\_032518) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: CLACP (COL25A1) (NM\_032518) Human Tagged ORF Clone Lentiviral Particle

Symbol: CLACP

Synonyms: AMY; CFEOM5; CLAC; CLAC-P; CLACP

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

 Tag:
 Myc-DDK

 ACCN:
 NM\_032518

ORF Size: 1926 bp

**ORF Nucleotide** 

Sequence:

The ORF insert of this clone is exactly the same as(RC222555).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 032518.2

 RefSeq Size:
 2681 bp

 RefSeq ORF:
 1929 bp

 Locus ID:
 84570

 UniProt ID:
 Q9BXS0

 Cytogenetics:
 4q25

**Domains:** Collagen

**Protein Families:** Transmembrane

**MW:** 63.5 kDa

**Gene Summary:** 

This gene encodes a brain-specific membrane associated collagen. A product of proteolytic processing of the encoded protein, CLAC (collagenous Alzheimer amyloid plaque component), binds to amyloid beta-peptides found in Alzheimer amyloid plaques but CLAC inhibits rather than facilitates amyloid fibril elongation (PMID: 16300410). A study of over-expression of this collagen in mice, however, found changes in pathology and behavior suggesting that the encoded protein may promote amyloid plaque formation (PMID: 19548013). Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Dec 2011]
