NRIP (DCAF6) (NM 018442) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: NRIP (DCAF6) (NM_018442) Human Tagged ORF Clone Lentiviral Particle

Symbol:

1200006M05Rik; ARCAP; IQWD1; MSTP055; NRIP; PC326 Synonyms:

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

mGFP Tag:

NM 018442 ACCN: **ORF Size:** 2640 bp

ORF Nucleotide

OTI Disclaimer:

Sequence:

MW:

The ORF insert of this clone is exactly the same as(RC222570).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 018442.2, NP 060912.2

98.2 kDa

RefSeq Size: 3303 bp RefSeq ORF: 2643 bp Locus ID: 55827

UniProt ID: Q58WW2

Cytogenetics: 1q24.2

Domains: IQ, WD40

Gene Summary:

The protein encoded by this gene is a ligand-dependent coactivator of nuclear receptors, including nuclear receptor subfamily 3 group C member 1 (NR3C1), glucocorticoid receptor (GR), and androgen receptor (AR). The encoded protein and DNA damage binding protein 2 (DDB2) may act as tumor promoters and tumor suppressors, respectively, by regulating the level of androgen receptor in prostate tissues. In addition, this protein can act with glucocorticoid receptor to promote human papillomavirus gene expression. [provided by RefSeq, Mar 2017]
