FSH beta (FSHB) (NM_000510) Human Tagged ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: FSH beta (FSHB) (NM_000510) Human Tagged ORF Clone

Tag:Myc-DDKSymbol:FSH betaSynonyms:HH24

Mammalian Cell Neomycin

Selection:

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)ORF Nucleotide>RC222666 ORF sequence

Chromatograms: https://cdn.origene.com/chromatograms/mk6461_f06.zip

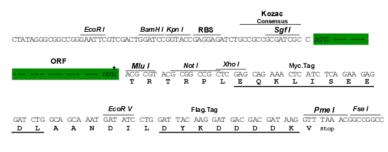

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_000510

ORF Size: 387 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 000510.4

 RefSeq Size:
 1936 bp

 RefSeq ORF:
 390 bp

 Locus ID:
 2488

 UniProt ID:
 P01225

Cytogenetics: 11p14.1

Protein Families: Druggable Genome, Secreted Protein

Protein Pathways: GnRH signaling pathway, Neuroactive ligand-receptor interaction

MW: 14.7 kDa

Gene Summary: The pituitary glycoprotein hormone family includes follicle-stimulating hormone, luteinizing

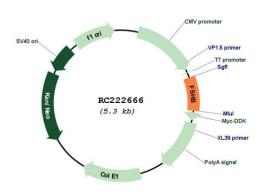

hormone, chorionic gonadotropin, and thyroid-stimulating hormone. All of these

glycoproteins consist of an identical alpha subunit and a hormone-specific beta subunit. This gene encodes the beta subunit of follicle-stimulating hormone. In conjunction with luteinizing

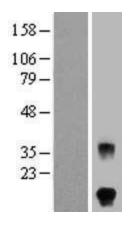

hormone, follicle-stimulating hormone induces egg and sperm production. Alternative splicing results in two transcript variants encoding the same protein. [provided by RefSeq, Jul

20081
