

Product datasheet for RC222709L2V

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

ATF 4 (ATF4) (NM_001675) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: ATF 4 (ATF4) (NM_001675) Human Tagged ORF Clone Lentiviral Particle

Symbol: ATF4

Synonyms: CREB-2; CREB2; TAXREB67; TXREB

Mammalian Cell

Selection:

None

Vector: pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM_001675 **ORF Size:** 1053 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC222709).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 001675.2

RefSeq Size:2022 bpRefSeq ORF:1056 bp

Locus ID: 468

UniProt ID: P18848
Cytogenetics: 22q13.1

Domains: BRLZ

Protein Families: Transcription Factors

ATF 4 (ATF4) (NM_001675) Human Tagged ORF Clone Lentiviral Particle - RC222709L2V

Protein Pathways: GnRH signaling pathway, Long-term potentiation, MAPK signaling pathway, Neurotrophin

signaling pathway, Prostate cancer

MW: 38.4 kDa

Gene Summary: This gene encodes a transcription factor that was originally identified as a widely expressed

mammalian DNA binding protein that could bind a tax-responsive enhancer element in the LTR of HTLV-1. The encoded protein was also isolated and characterized as the cAMP-response element binding protein 2 (CREB-2). The protein encoded by this gene belongs to a family of DNA-binding proteins that includes the AP-1 family of transcription factors, cAMP-response element binding proteins (CREBs) and CREB-like proteins. These transcription factors share a leucine zipper region that is involved in protein-protein interactions, located C-terminal to a stretch of basic amino acids that functions as a DNA binding domain. Two alternative transcripts encoding the same protein have been described. Two pseudogenes are located on the X chromosome at q28 in a region containing a large inverted duplication.
