OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	 thod: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

CARD11 (NM_032415) Human Tagged Lenti ORF Clone – RC222740L1

Gene Summary:The protein encoded by this gene belongs to the membrane-associated guanylate kinase
(MAGUK) family, a class of proteins that functions as molecular scaffolds for the assembly of
multiprotein complexes at specialized regions of the plasma membrane. This protein is also a
member of the CARD protein family, which is defined by carrying a characteristic caspase-
associated recruitment domain (CARD). This protein has a domain structure similar to that of
CARD14 protein. The CARD domains of both proteins have been shown to specifically interact
with BCL10, a protein known to function as a positive regulator of cell apoptosis and NF-
kappaB activation. When expressed in cells, this protein activated NF-kappaB and induced the
phosphorylation of BCL10. [provided by RefSeq, Jul 2008]
