Gene Summary:This gene encodes a pseudouridine synthase that converts uridine to pseudouridine once it<br/>has been incorporated into an RNA molecule. The encoded enzyme may play an essential<br/>role in tRNA function and in stabilizing the secondary and tertiary structure of many RNAs. A<br/>mutation in this gene has been linked to mitochondrial myopathy and sideroblastic anemia.<br/>Alternate splicing results in multiple transcript variants.[provided by RefSeq, Sep 2009]
