LAP2 (TMPO) (NM_001032284) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: LAP2 (TMPO) (NM_001032284) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: LAP2

Synonyms: CMD1T; LAP2; LEMD4; PRO0868; TP

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

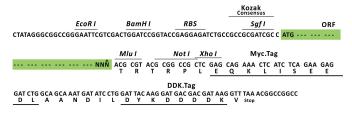

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC222866).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_001032284

ORF Size: 1035 bp

LAP2 (TMPO) (NM_001032284) Human Tagged Lenti ORF Clone - RC222866L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001032284.1</u>

 RefSeq Size:
 2374 bp

 RefSeq ORF:
 1038 bp

 Locus ID:
 7112

 UniProt ID:
 P42167

Cytogenetics: 12q23.1

Protein Families: Stem cell - Pluripotency, Transmembrane

MW: 38.6 kDa

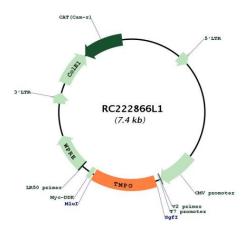

Gene Summary: Through alternative splicing, this gene encodes several distinct LEM domain containing

protein isoforms. LEM domain proteins include inner nuclear membrane and intranuclear proteins, and are involved in a variety of cellular functions including gene expression, chromatin organization, and replication and cell cycle control. The encoded alpha isoform is broadly diffuse in the nucleus and contains a lamin binding domain, while the beta and gamma isoforms are localized to the nuclear membrane and contain an HDAC3 interaction domain. The distinct isoforms may compete with each other when acting to chaperone other

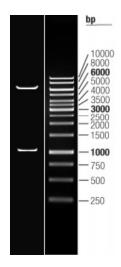

proteins and regulate transcription. [provided by RefSeq, Aug 2019]
