Product datasheet for RC222909L4V

Her2 (ERBB2) (NM_001005862) Human Tagged ORF Clone Lentiviral Particle

Product data:

| Product Type: | Lentiviral Particles |
|------------------------------|---|
| Product Name: | Her2 (ERBB2) (NM_001005862) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | Her2 |
| Synonyms: | CD340; HER-2; HER-2/neu; HER2; MLN 19; NEU; NGL; TKR1 |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-mGFP-P2A-Puro (PS100093) |
| Tag: | mGFP |
| ACCN: | NM_001005862 |
| ORF Size: | 3675 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC222909). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | <u>NM 001005862.1</u> |
| RefSeq Size: | 4816 bp |
| RefSeq ORF: | 3678 bp |
| Locus ID: | 2064 |
| UniProt ID: | <u>P04626</u> |
| Cytogenetics: | 17q12 |
| Protein Families: | Druggable Genome, Protein Kinase, Transmembrane |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Her2 (ERBB2) (NM_001005862) Human Tagged ORF Clone Lentiviral Particle - RC222909L4V **Protein Pathways:** Adherens junction, Bladder cancer, Calcium signaling pathway, Endometrial cancer, ErbB signaling pathway, Focal adhesion, Non-small cell lung cancer, Pancreatic cancer, Pathways in cancer, Prostate cancer MW: 134.7 kDa This gene encodes a member of the epidermal growth factor (EGF) receptor family of Gene Summary: receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinasemediated activation of downstream signalling pathways, such as those involving mitogenactivated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions 654 and 655 of isoform a (positions 624 and 625 of isoform b) have been reported, with the most common allele, Ile654/Ile655, shown here. Amplification and/or overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding different isoforms and others that have not been fully characterized. [provided by RefSeq, Jul 2008]
