PICK1 (NM_001039583) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PICK1 (NM_001039583) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: PICK1

Synonyms: PICK; PRKCABP

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC222916).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_001039583

ORF Size: 1245 bp

PICK1 (NM_001039583) Human Tagged Lenti ORF Clone - RC222916L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001039583.1</u>, <u>NP 001034672.1</u>

RefSeq Size:2126 bpRefSeq ORF:1248 bpLocus ID:9463

UniProt ID: Q9NRD5

Cytogenetics: 22q13.1

Protein Families: Druggable Genome

MW: 46.6 kDa

Gene Summary: The protein encoded by this gene contains a PDZ domain, through which it interacts with

protein kinase C, alpha (PRKCA). This protein may function as an adaptor that binds to and organizes the subcellular localization of a variety of membrane proteins. It has been shown to

interact with multiple glutamate receptor subtypes, monoamine plasma membrane

transporters, as well as non-voltage gated sodium channels, and may target PRKCA to these membrane proteins and thus regulate their distribution and function. This protein has also been found to act as an anchoring protein that specifically targets PRKCA to mitochondria in a ligand-specific manner. Three transcript variants encoding the same protein have been

found for this gene. [provided by RefSeq, Jul 2008]
