Cytokeratin 3 (KRT3) (NM_057088) Human Tagged ORF Clone Lentiviral Particle – RC223011L3V

Gene Summary:The protein encoded by this gene is a member of the keratin gene family. The type II
cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic
keratin chains coexpressed during differentiation of simple and stratified epithelial tissues.
This type II cytokeratin is specifically expressed in the corneal epithelium with family member
KRT12 and mutations in these genes have been associated with Meesmann's Corneal
Dystrophy. The type II cytokeratins are clustered in a region of chromosome 12q12-q13.
