

Product datasheet for RC223052L3

MBNL1 (NM_207292) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: MBNL1 (NM_207292) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: MBNL1

Synonyms: EXP; MBNL
Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC223052).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_207292

ORF Size: 1110 bp

MBNL1 (NM_207292) Human Tagged Lenti ORF Clone - RC223052L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 207292.1</u>

RefSeq Size: 6368 bp RefSeq ORF: 1113 bp

Locus ID: 4154

UniProt ID: Q9NR56

Cytogenetics: 3q25.1-q25.2

MW: 39.7 kDa

Gene Summary: This gene encodes a member of the muscleblind protein family which was initially described

in Drosophila melanogaster. The encoded protein is a C3H-type zinc finger protein that modulates alternative splicing of pre-mRNAs. Muscleblind proteins bind specifically to

expanded dsCUG RNA but not to normal size CUG repeats and may thereby play a role in the pathophysiology of myotonic dystrophy. Mice lacking this gene exhibited muscle

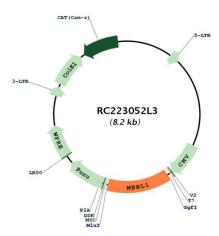

abnormalities and cataracts. Several alternatively spliced transcript variants have been described but the full-length natures of only some have been determined. The different isoforms are thought to have different binding specificities and/or splicing activities. Insert

isoforms are thought to have different binding specificities and/or splicing activities. [provided

by RefSeq, Sep 2015]
