## MLX (NM\_198205) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** MLX (NM\_198205) Human Tagged ORF Clone Lentiviral Particle

Symbol: MLX

Synonyms: bHLHd13; MAD7; MXD7; TCFL4; TF4

Mammalian Cell

Selection:

Puromycin

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM\_198205

ORF Size: 642 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC223064).

Sequence:

Cytogenetics:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 198205.1, NP 937848.1

 RefSeq Size:
 2316 bp

 RefSeq ORF:
 645 bp

 Locus ID:
 6945

 UniProt ID:
 Q9UH92

**Protein Families:** Druggable Genome, Transcription Factors

17q21.2

MW: 24.7 kDa

## **Gene Summary:**

The product of this gene belongs to the family of basic helix-loop-helix leucine zipper (bHLH-Zip) transcription factors. These factors form heterodimers with Mad proteins and play a role in proliferation, determination and differentiation. This gene product may act to diversify Mad family function by its restricted association with a subset of the Mad family of transcriptional repressors, namely, Mad1 and Mad4. Alternatively spliced transcript variants encoding different isoforms have been identified for this gene. [provided by RefSeq, Jul 2008]
