## RFXANK (NM\_134440) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: RFXANK (NM 134440) Human Tagged ORF Clone Lentiviral Particle

Symbol: RFXANK

Synonyms: ANKRA1; BLS; F14150\_1; RFX-B

Mammalian Cell

Selection:

Puromycin

Vector:

pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_134440

ORF Size: 714 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC223081).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 134440.1

 RefSeq Size:
 1386 bp

 RefSeq ORF:
 714 bp

 Locus ID:
 8625

 UniProt ID:
 014593

Cytogenetics: 19p13.11

Domains: ANK

**Protein Families:** Druggable Genome, Transcription Factors

## RFXANK (NM\_134440) Human Tagged ORF Clone Lentiviral Particle - RC223081L4V

**Protein Pathways:** Antigen processing and presentation, Primary immunodeficiency

**MW:** 25.7 kDa

**Gene Summary:** Major histocompatibility (MHC) class II molecules are transmembrane proteins that have a

central role in development and control of the immune system. The protein encoded by this gene, along with regulatory factor X-associated protein and regulatory factor-5, forms a complex that binds to the X box motif of certain MHC class II gene promoters and activates their transcription. Once bound to the promoter, this complex associates with the non-DNA-binding factor MHC class II transactivator, which controls the cell type specificity and inducibility of MHC class II gene expression. This protein contains ankyrin repeats involved in

protein-protein interactions. Mutations in this gene have been linked to bare lymphocyte syndrome type II, complementation group B. Multiple alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq, Jul 2013]
