KIR2.3 (KCNJ4) (NM_152868) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: KIR2.3 (KCNJ4) (NM_152868) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: KIR2.3

Synonyms: HIR; HIRK2; HRK1; IRK-3; IRK3; Kir2.3

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC223261).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_152868

ORF Size: 1335 bp

KIR2.3 (KCNJ4) (NM_152868) Human Tagged Lenti ORF Clone - RC223261L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 152868.1</u>

 UniProt ID:
 P48050

 Cytogenetics:
 22q13.1

Protein Families: Druggable Genome, Ion Channels: Potassium, Transmembrane

MW: 49.3 kDa

Gene Summary: Several different potassium channels are known to be involved with electrical signaling in the

nervous system. One class is activated by depolarization whereas a second class is not. The latter are referred to as inwardly rectifying K+ channels, and they have a greater tendency to allow potassium to flow into the cell rather than out of it. This asymmetry in potassium ion conductance plays a key role in the excitability of muscle cells and neurons. The protein encoded by this gene is an integral membrane protein and member of the inward rectifier potassium channel family. The encoded protein has a small unitary conductance compared to other members of this protein family. Two transcript variants encoding the same protein

have been found for this gene. [provided by RefSeq, Jul 2008]
