Thymidine Kinase 2 (TK2) (NM_004614) Human Tagged ORF Clone Lentiviral Particle – RC223312L3V		
Protein Pathwa	ys:	Drug metabolism - other enzymes, Metabolic pathways, Pyrimidine metabolism
MW:		31 kDa
Gene Summary	:	This gene encodes a deoxyribonucleoside kinase that specifically phosphorylates thymidine, deoxycytidine, and deoxyuridine. The encoded enzyme localizes to the mitochondria and is required for mitochondrial DNA synthesis. Mutations in this gene are associated with a myopathic form of mitochondrial DNA depletion syndrome. Alternate splicing results in multiple transcript variants encoding distinct isoforms, some of which lack transit peptide, so are not localized to mitochondria. [provided by RefSeq, Dec 2012]
