

## Product datasheet for RC223382L3V

## OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

## Anoctamin 3 (ANO3) (NM\_031418) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Anoctamin 3 (ANO3) (NM\_031418) Human Tagged ORF Clone Lentiviral Particle

Symbol: Anoctamin 3

Synonyms: C11orf25; DYT23; DYT24; GENX-3947; TMEM16C

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

 Tag:
 Myc-DDK

 ACCN:
 NM\_031418

 ORF Size:
 2943 bp

**ORF Nucleotide** 

Sequence:

The ORF insert of this clone is exactly the same as(RC223382).

OTI Disclaimer: Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements.

Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.

verification at a reduced cost. Please contact our customer care team at

custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 031418.1</u>

RefSeq Size: 6641 bp RefSeq ORF: 2946 bp

## Anoctamin 3 (ANO3) (NM\_031418) Human Tagged ORF Clone Lentiviral Particle - RC223382L3V

**Locus ID:** 63982

UniProt ID: Q9BYT9

**Cytogenetics:** 11p14.3-p14.2

**Protein Families:** Transmembrane

MW: 114.5 kDa

**Gene Summary:** The protein encoded by this gene belongs to the TMEM16 family of predicted membrane

proteins, that are also known as anoctamins. While little is known about the function of this gene, mutations in this gene have been associated with some cases of autosomal dominant

craniocervical dystonia. Cells from individuals with a mutation in this gene exhibited

abnormalities in endoplasmic reticulum-dependent calcium signaling. Studies in rat show that

the rat ortholog of this protein interacts with, and modulates the activity of a sodium-

activated potassium channel. Deletion of this gene caused increased pain sensitivity in the rat model system. Alternative splicing results in multiple transcript variants encoding different

isoforms. [provided by RefSeq, Aug 2015]
