# Product datasheet for RC223464L1

# GAD65 (GAD2) (NM\_000818) Human Tagged Lenti ORF Clone

# **Product data:**

Product Type:	Expression Plasmids
Product Name:	GAD65 (GAD2) (NM_000818) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	GAD65
Synonyms:	GAD65
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC223464).
<b>Restriction Sites:</b>	Sgfl-RsrII
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Rsr II            GCG ATC GC         ATG //         NNN         AG[C GGA CCG]

ACCN:

ORF Size:

NM\_000818 1755 bp

	AD65 (GAD2) (NM_000818) Human Tagged Lenti ORF Clone – RC223464L1
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Met	<ul> <li>thod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>
RefSeq:	<u>NM 000818.1</u>
RefSeq Size:	2824 bp
RefSeq ORF:	1758 bp
Locus ID:	2572
UniProt ID:	<u>Q05329</u>
Cytogenetics:	10p12.1
Protein Families:	Druggable Genome
Protein Pathways:	Alanine, aspartate and glutamate metabolism, beta-Alanine metabolism, Butanoate metabolism, Metabolic pathways, Taurine and hypotaurine metabolism, Type I diabetes mellitus
MW:	65.4 kDa

#### GAD65 (GAD2) (NM\_000818) Human Tagged Lenti ORF Clone – RC223464L1

Gene Summary:This gene encodes one of several forms of glutamic acid decarboxylase, identified as a major<br/>autoantigen in insulin-dependent diabetes. The enzyme encoded is responsible for catalyzing<br/>the production of gamma-aminobutyric acid from L-glutamic acid. A pathogenic role for this<br/>enzyme has been identified in the human pancreas since it has been identified as an<br/>autoantibody and an autoreactive T cell target in insulin-dependent diabetes. This gene may<br/>also play a role in the stiff man syndrome. Alternative splicing results in multiple transcript<br/>variants that encode the same protein. [provided by RefSeq, Oct 2008]
