

Product datasheet for **RC223492L3V**

PUF60 (NM_078480) Human Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Type: | Lentiviral Particles |
| Product Name: | PUF60 (NM_078480) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | PUF60 |
| Synonyms: | FIR; RoBPI; SIAHBP1; VRJS |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-Myc-DDK-P2A-Puro (PS100092) |
| Tag: | Myc-DDK |
| ACCN: | NM_078480 |
| ORF Size: | 1674 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC223492). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_078480.1 |
| RefSeq Size: | 1946 bp |
| RefSeq ORF: | 1680 bp |
| Locus ID: | 22827 |
| UniProt ID: | Q9UHX1 |
| Cytogenetics: | 8q24.3 |
| Domains: | RRM, RRM_1 |
| Protein Pathways: | Spliceosome |

MW: 59.7 kDa

Gene Summary: This gene encodes a nucleic acid-binding protein that plays a role in a variety of nuclear processes, including pre-mRNA splicing and transcriptional regulation. The encoded protein forms a complex with the far upstream DNA element (FUSE) and FUSE-binding protein at the myelocytomatosis oncogene (MYC) promoter. This complex represses MYC transcription through the core-TFIID basal transcription factor. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. [provided by RefSeq, Aug 2012]
