	MAFK (NM_002360) Human Tagged Lenti ORF Clone – RC223543L4
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Me	 thod: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 002360.2</u>
RefSeq Size:	1581 bp
RefSeq ORF:	471 bp
Locus ID:	7975
UniProt ID:	<u>O60675</u>
Cytogenetics:	7p22.3
Domains:	bZIP_Maf, BRLZ
Protein Families:	Druggable Genome, Transcription Factors
MW:	17.3 kDa

Scheme Content and Content and

Gene Summary:The developmentally regulated expression of the globin genes depends on upstream
regulatory elements termed locus control regions (LCRs). LCRs are associated with powerful
enhancer activity that is mediated by the transcription factor NFE2 (nuclear factor erythroid-
2). NFE2 recognition sites are also present in the gene promoters of 2 heme biosynthetic
enzymes, porphobilinogen deaminase (PBGD; MIM 609806) and ferrochelatase (FECH; MIM
612386). NFE2 DNA-binding activity consists of a heterodimer containing an 18-kD Maf
protein (MafF, MafG (MIM 602020), or MafK) and p45 (MIM 601490). Both subunits are
members of the activator protein-1 superfamily of basic leucine zipper (bZIP) proteins (see
MIM 165160). Maf homodimers suppress transcription at NFE2 sites.[supplied by OMIM, Nov
2008]
