TRF2 (TERF2) (NM_005652) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: TRF2 (TERF2) (NM_005652) Human Tagged ORF Clone Lentiviral Particle

Symbol: TERF2

Synonyms: TRBF2; TRF2

Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

ACCN: NM_005652

ORF Size: 1500 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC223601).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 005652.2

 RefSeq Size:
 2909 bp

 RefSeq ORF:
 1629 bp

 Locus ID:
 7014

 UniProt ID:
 Q15554

Cytogenetics: 16q22.1

Domains: myb_DNA-binding

Protein Families: Transcription Factors

ORIGENE

MW: 55.4 kDa

Gene Summary: This gene encodes a telomere specific protein, TERF2, which is a component of the telomere

nucleoprotein complex. This protein is present at telomeres in metaphase of the cell cycle, is a second negative regulator of telomere length and plays a key role in the protective activity of telomeres. While having similar telomere binding activity and domain organization, TERF2 differs from TERF1 in that its N terminus is basic rather than acidic. [provided by RefSeq, Jul

2008]
