OTI Disclaimer:

Sequence:

The ORF insert of this clone is exactly the same as(RC223713).

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

PIP5K1 beta (PIP5K1B) (NM_003558) Human Tagged ORF Clone Lentiviral Particle - RC223713L3V

Protein Pathways: Endocytosis, Fc gamma R-mediated phagocytosis, Inositol phosphate metabolism, Metabolic

pathways, Phosphatidylinositol signaling system, Regulation of actin cytoskeleton

MW: 60.9 kDa

Gene Summary: Participates in the biosynthesis of phosphatidylinositol 4,5-bisphosphate. Mediates RAC1-

dependent reorganization of actin filaments. Contributes to the activation of PLD2. Together with PIP5K1A is required after stimulation of G-protein coupled receptors for stable platelet

adhesion (By similarity).[UniProtKB/Swiss-Prot Function]
