## Product datasheet for RC223809L2V

## RUNX1 (NM\_001754) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

Product Type:	Lentiviral Particles
Product Name:	RUNX1 (NM_001754) Human Tagged ORF Clone Lentiviral Particle
Symbol:	RUNX1
Synonyms:	AML1; AML1-EVI-1; AMLCR1; CBF2alpha; CBFA2; EVI-1; PEBP2aB; PEBP2alpha
Mammalian Cell Selection:	None
Vector:	pLenti-C-mGFP (PS100071)
Tag:	mGFP
ACCN:	NM_001754
ORF Size:	1440 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC223809).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001754.3</u>
RefSeq Size:	6190 bp
RefSeq ORF:	1443 bp
Locus ID:	861
UniProt ID:	<u>Q01196</u>
Cytogenetics:	21q22.12
Domains:	Runt
Protein Families:	Druggable Genome, ES Cell Differentiation/IPS, Transcription Factors

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	RUNX1 (NM_001754) Human Tagged ORF Clone Lentiviral Particle – RC223809L2V
Protein Pathway	<b>s:</b> Acute myeloid leukemia, Chronic myeloid leukemia, Pathways in cancer
MW:	51.6 kDa
Gene Summary:	Core binding factor (CBF) is a heterodimeric transcription factor that binds to the core element of many enhancers and promoters. The protein encoded by this gene represents the alpha subunit of CBF and is thought to be involved in the development of normal hematopoiesis. Chromosomal translocations involving this gene are well-documented and have been associated with several types of leukemia. Three transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
