

## Product datasheet for **RC223838L4V**

### **BPGM (NM\_001724) Human Tagged ORF Clone Lentiviral Particle**

#### **Product data:**

Product Type:	Lentiviral Particles
Product Name:	BPGM (NM_001724) Human Tagged ORF Clone Lentiviral Particle
Symbol:	BPGM
Synonyms:	DPGM; ECYT8
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_001724
ORF Size:	777 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC223838).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <a href="#">More info</a>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<a href="#">NM_001724.3</a>
RefSeq Size:	1800 bp
RefSeq ORF:	780 bp
Locus ID:	669
UniProt ID:	<a href="#">P07738</a>
Cytogenetics:	7q33
Domains:	PGAM
Protein Families:	Druggable Genome

**Protein Pathways:** Glycolysis / Gluconeogenesis, Metabolic pathways

**MW:** 30 kDa

**Gene Summary:** 2,3-diphosphoglycerate (2,3-DPG) is a small molecule found at high concentrations in red blood cells where it binds to and decreases the oxygen affinity of hemoglobin. This gene encodes a multifunctional enzyme that catalyzes 2,3-DPG synthesis via its synthetase activity, and 2,3-DPG degradation via its phosphatase activity. The enzyme also has phosphoglycerate phosphomutase activity. Deficiency of this enzyme increases the affinity of cells for oxygen. Mutations in this gene result in hemolytic anemia. Multiple alternatively spliced variants, encoding the same protein, have been identified. [provided by RefSeq, Sep 2009]

### Product images:

[RC223838L4] was used to prepare Lentiviral particles using [TR30037] packaging kit. HEK293T cells were transduced with RC223838L4V particle to overexpress human BPGM-mGFP fusion protein.
