PAICS (NM_001079525) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: PAICS (NM_001079525) Human Tagged ORF Clone Lentiviral Particle

Symbol: PAICS

Synonyms: ADE2; ADE2H1; AIRC; PAIS

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

ACCN: NM_001079525

ORF Size: 1296 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC223925).

Sequence:

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001079525.1</u>

 RefSeq Size:
 3350 bp

 RefSeq ORF:
 1299 bp

 Locus ID:
 10606

 UniProt ID:
 P22234

Cytogenetics: 4q12

Protein Families: Druggable Genome

Protein Pathways: Metabolic pathways, Purine metabolism

ORIGENE

MW: 47.8 kDa

Gene Summary: This gene encodes a bifunctional enzyme containing phosphoribosylaminoimidazole

carboxylase activity in its N-terminal region and phosphoribosylaminoimidazole succinocarboxamide synthetase in its C-terminal region. It catalyzes steps 6 and 7 of purine biosynthesis. The gene is closely linked and divergently transcribed with a locus that encodes an enzyme in the same pathway, and transcription of the two genes is coordinately

regulated. The human genome contains several pseudogenes of this gene. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul

2008]
