Gene Summary:This gene is a member of the H/ACA snoRNPs (small nucleolar ribonucleoproteins) gene
family. snoRNPs are involved in various aspects of rRNA processing and modification and
have been classified into two families: C/D and H/ACA. The H/ACA snoRNPs also include the
DKC1, NOLA1 and NOLA3 proteins. These four H/ACA snoRNP proteins localize to the dense
fibrillar components of nucleoli and to coiled (Cajal) bodies in the nucleus. Both 18S rRNA
production and rRNA pseudouridylation are impaired if any one of the four proteins is
depleted. The four H/ACA snoRNP proteins are also components of the telomerase complex.
This gene encodes a protein related to Saccharomyces cerevisiae Nhp2p. Alternative splicing
results in multiple transcript variants. [provided by RefSeq, Oct 2008]
