Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

## MAS1 (NM\_002377) Human Tagged ORF Clone Lentiviral Particle - RC224124L4V

MW: 37.3 kDa

Gene Summary: This gene encodes a class I seven-transmembrane G-protein-coupled receptor. The encoded

protein is a receptor for angiotensin-(1-7) and preferentially couples to the Gq protein, activating the phospholipase C signaling pathway. The encoded protein may play a role in multiple processes including hypotension, smooth muscle relaxation and cardioprotection by

mediating the effects of angiotensin-(1-7). [provided by RefSeq, May 2012]
