

Product datasheet for RC224151L4

ME3 (NM_006680) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ME3 (NM_006680) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: ME3

Synonyms: NADP-ME

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

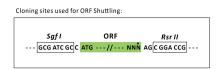

E. coli Selection: Chloramphenicol (34 ug/mL)

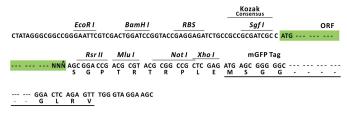

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC224151).

Sequence:

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

 $[\]ensuremath{^*}$ The last codon before the Stop codon of the ORF.

ACCN: NM_006680

ORF Size: 1812 bp

ME3 (NM_006680) Human Tagged Lenti ORF Clone - RC224151L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 006680.2</u>, <u>NP 006671.2</u>

 RefSeq Size:
 2090 bp

 RefSeq ORF:
 1815 bp

 Locus ID:
 10873

 UniProt ID:
 Q16798

 Cytogenetics:
 11q14.2

Domains: malic

Protein Pathways: Metabolic pathways, Pyruvate metabolism

MW: 66.9 kDa

Gene Summary: Malic enzyme catalyzes the oxidative decarboxylation of malate to pyruvate using either

NAD+ or NADP+ as a cofactor. Mammalian tissues contain 3 distinct isoforms of malic enzyme: a cytosolic NADP(+)-dependent isoform, a mitochondrial NADP(+)-dependent isoform, and a mitochondrial NAD(+)-dependent isoform. This gene encodes a mitochondrial

NADP(+)-dependent isoform. Multiple alternatively spliced transcript variants have been found for this gene, but the biological validity of some variants has not been determined.
