## ENDOGL1 (EXOG) (NM\_005107) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: ENDOGL1 (EXOG) (NM\_005107) Human Tagged ORF Clone Lentiviral Particle

Symbol: ENDOGL1

Synonyms: ENDOGL1; ENDOGL2; ENGL; ENGL-a; ENGL-b; ENGLA; ENGLB

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_005107 **ORF Size:** 1104 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC224222).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 005107.1

 RefSeq Size:
 1460 bp

 RefSeq ORF:
 1107 bp

 Locus ID:
 9941

 UniProt ID:
 Q9Y2C4

 Cytogenetics:
 3p22.2

**Domains:** Endonuclease

**Protein Families:** Druggable Genome, Transmembrane

## ENDOGL1 (EXOG) (NM\_005107) Human Tagged ORF Clone Lentiviral Particle - RC224222L2V

**Protein Pathways:** Apoptosis

MW: 41.08 kDa

**Gene Summary:** This gene encodes an endo/exonuclease with 5'-3' exonuclease activity. The encoded enzyme

catalyzes the hydrolysis of ester linkages at the 5' end of a nucleic acid chain. This enzyme is localized to the mitochondria and may play a role in programmed cell death. Alternatively spliced transcript variants have been described. A pseudogene exists on chromosome 18.
