Ellis van Creveld syndrome (EVC) (NM_153717) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Tag: mGFP

Symbol: Ellis van Creveld syndrome

Synonyms: DWF-1; EVC1; EVCL

Mammalian Cell None

Selection:

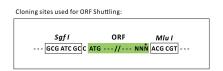

Vector: pLenti-C-mGFP (PS100071)

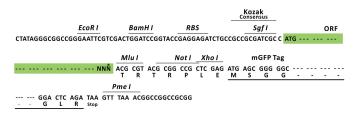

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC224382).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_153717

ORF Size: 2973 bp

Ellis van Creveld syndrome (EVC) (NM_153717) Human Tagged Lenti ORF Clone | RC224382L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature. $\,$

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

RefSeq: <u>NM_153717.1</u>

RefSeq Size: 6430 bp

RefSeq ORF: 2979 bp

Locus ID: 2121

UniProt ID: <u>P57679</u>

Cytogenetics: 4p16.2

Protein Families: Transmembrane

MW: 111.8 kDa

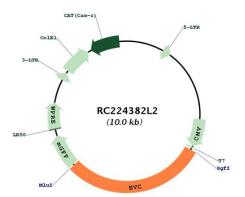

Gene Summary: This gene encodes a protein containing a leucine zipper and a transmembrane domain. This

gene has been implicated in both Ellis-van Creveld syndrome (EvC) and Weyers acrodental

dysostosis. [provided by RefSeq, Jul 2008]
